ıg

This Test Report is Issued Under the Authority of :

Compiled by

Erik Cheng/ Engineer

Approved by Service Conception of the sting center of the sting ce

\*Remarks:

The results shown in this test report refer only to the sample(s) tested, this test report cannot bereproduced, except in full, without prior written permission of Shenzhen Nore Testing Center Co., Ltd. The report would be invalid without specific stamp of test institute and the signatures of compiler and approver.

TEL: +86-755-33525266 FAX: +86-75523004002 Web: www.ntc-c.com Address: South, No. 1, Building 10, Maqueling Industrial Zone, Nanshan, Shenzhen, Guangdong, 518057, China

# **Revision History of This Test Report**

Report Number	Description	Issued Date
SZNTC21121031SV00	Initial Issue	2022-01-05

Tested for moderate conditions

# Test item particulars: Environmental conditions...... -10°C~+40°C, 95.%RH, no condensation Operating conditions..... Continuous operation Connection to supply mains..... Permanent connection Degree of mobility..... Fixed equipment Mass of the equipment..... See user manual Special protection to IEC 60529..... IP20 Fan forced cooling Cooling..... Accessories and detachable parts included in the N/A evaluation..... Possible test case verdicts: - test case does not apply to the test object...... N(Not Applicable) - test object does meet the requirement..... P(ass) test object does not meet the requirement...... F(ail)

#### **General remarks**

This test report shall not be reproduced except in full without the written approval of the testing laboratory.

The test results presented in this report relate only to the item tested.

"(see remark #)" refers to a remark appended to the report.

"(see appended table)" refers to a table appended to the report.

Throughout this report a dot is used as the decimal separator.

#### Comments:

Factory: Shenzhen Cumark Sci. & Tech. Co., Ltd.

Address: 3F, Cumark Building, Dongzhou Community, Guangming Street, Guangming District, Shenzhen

#### General Descriptions of Product:

All tests are carried out on ES350-F0-4K0G-3B and the whole series has the same circuit principle Indoor use; Fixed installation

Altitude <1000m,

Free from dust, corrosive gas, and direct sunlight.

4	PROTECTION AGAINST ELECTRIC SHOCK, THERMAL, AND ENERGY HAZARDS		Р
4.1	General	Considered	Р
4.2	Fault conditions	Considered	Р
4.3	Protection against electric shock		Р
4.3.1	Decisive voltage classification		Р
4.3.1.1	Use of decisive voltage class (DVC)	According to Table 3 correlates the limits of the working voltage within the circuit.	Р
4.3.1.2	Limits of DVC		Р
	DVC A		Р
	DVC B		N
	DVC C	≥200V peak and 200Vr.m.s considered.	Р
	DVC D		N
4.3.1.3	Requirements for protection		Р
	DVC of considered circuit	There is protective isolation between DVC C circuit and DVC A circuit	Р
	Protection required against direct contact	Yes	Р
	Insulation to earthed parts	Basic insulation	Р
	Insulation to accessible conductive parts that are not earthed	Protective separation	Р
	Insulation to adjacent circuit of DVC:		Р
4.3.1.4	Circuit evaluation	AC and DC circuits	Р
4.3.1.4.1	General		Р
4.3.1.4.2	AC working voltage		Р
4.3.1.4.3	DC working voltage		Р
4.3.1.4.4	Pulsating working voltage		N
4.3.2	Protective separation	Be fully and effectively maintained under all conditions of intended use.	Р
4.3.3	Protection against direct contact		Р
4.3.3.1	General	See 4.3.3.2 and 4.3.3.3	Р

	EN 61800-5-1		
Clause	Requirement + Test	Result - Remark	Verdict

4.3.3.2	Protection by means of insulation of live parts	Impulse voltage, temporary overvoltage or working voltage was considered.	Ρ
	Case a): Accessible parts are conductive and are connected to earth by protective bonding.		Р
	Cases b): Accessible parts are non-conductive		Р
	Cases c): Accessible parts are conductive but not connected to earth by protective bonding		Р
4.3.3.3	Protection by means of enclosures and barriers	Metal enclosure and plastic enclosure provided. IP20.	Р
	Live parts of DVC B, C or D		Р
	Open type sub-assemblies		Р
	Products containing circuits of DVC A, B or C, intended for installation in closed electrical operating areas		Р
	Products containing circuits of DVC D, intended for installation within a closed electrical operating area		Ρ
4.3.4	Protection in case of direct contact		Р
4.3.4.1	General		Р
4.3.4.2	Protection using DVC A		Р
4.3.4.3	Protection by means of protective impedance		Р
	Stored charge < 50µC		Ν
	Current <3,5 mA a.c. or 10 mA d.c.		Р
4.3.4.4	Protection by means of limited voltage		Ν
4.3.5	Protection against indirect contact		Р
4.3.5.1	General	Protective class I	Р
	Class 0		Ν
	Class I		Р
	Class II		Ν
	Class III		Ν
4.3.5.2	Insulation between live parts and accessible conductive parts		Р
4.3.5.3	Protective bonding circuit		Р
4.3.5.3.1	General		Р

	Insulating material group IIIa 400 > CTI ≥ 175		N
	Insulating material group IIIb 175 > CTI ≥ 100	Considered	Р
4.3.6.6	Coating		N
4.3.6.7	PWB spacings for functional insulation	Rating of V-0, CTI >100.	Р
4.3.6.8	Solid insulation		Р
4.3.6.8.1	General	Withstand mechanical, electrical, thermal and climatic stresses expected in normal use	Ρ
4.3.6.8.2	Requirements for electrical withstand capability		Р
4.3.6.8.2.1	Basic or supplementary Insulation		Р
4.3.6.8.2.2	Double and reinforced Insulation		N
4.3.6.8.2.3	Functional insulation		Р
4.3.6.8.3	Thin sheet or tape material		Р
4.3.6.8.3.1	General		N
4.3.6.8.3.2	Material thickness not less than 0,2 mm		N
4.3.6.8.3.3	Material thickness less than 0,2 mm		N
4.3.6.8.3.4	Compliance is checked by the tests described in 5.2.3.1 to 5.2.3.3.		Р
4.3.6.8.4	Printed wiring boards (PWBs)		Р
4.3.6.8.4.1	General		Р
	Conductor layers in double-sided single-layer PWBs, multi-layer PWBs and metal core PWBs		Р

		EN 61800-5-1		
Clause	Requirement + Test		Result - Remark	Verdict

	Adjacent tracks on the same layer for the inner layers of multi-layer PWBs		Р
4.3.6.8.4.2	Use of coating materials		N
	Type 1 protection		N
	Type 2 protection		N
4.3.6.8.5	Wound components	Meet the requirements of 4.3.6.8.1 and 4.3.6.8.2	Р
4.3.6.8.6	Potting materials		N
4.3.6.9	Insulation requirements above 30 kHz		Р
4.3.7	Enclosure		Р
4.3.7.1	General		Р
4.3.7.2	Cast metal		N
4.3.7.3	Sheet metal		N
4.3.8	Wiring and connections		Р
4.3.8.1	General	The insulation, conductors and routing of all wires of the equipment were suitable for the electrical, mechanical, thermal and environmental conditions of use	Ρ
4.3.8.2	Routing		Р
	Hole through which insulated wires pass in a sheet metal wall within the enclosure of the equipment.		N
	Routing for internal wiring	Routed away from sharp edges and similar parts, which abrade the wire insulation	Р
	Clamps and guides, either metallic or non- metallic, used for routing stationary internal wiring		N
4.3.8.3	Color coding		Р
4.3.8.4	Splices and connections		Р
4.3.8.5	Accessible connections		Р
4.3.8.6	Interconnections between parts of the PDS		N
	Cable assemblies and flexible cords		N
	Misalignment of male and female connectors		N
	External interconnecting cables terminate in a plug		N

EN 61800-5-1				
Clause	Requirement + Test		Result - Remark	Verdict

4.3.8.7	Supply connections		Р
4.3.8.8	Terminals		Р
4.3.8.8.1	Construction requirements		Р
4.3.8.8.2	Connecting capacity	Accommodate the conductors specified in the installation and maintenance manuals.	Р
4.3.8.8.3	Connection	Readily accessible during installation.	Р
4.3.8.8.4	Wire bending space for wires 10 mm <sup>2</sup> and greater		N
	low-voltage PDS		N
	high-voltage PDS		N
4.3.9	Output short-circuit requirements		Р
	Performed according to 5.2.3.6 on all power outputs		Р
4.3.10	Residual current-operated protective (RCD) or monitoring (RCM) device compatibility		N
	a) A plug-connected single-phase PDS with rated input current less than or equal to 16 A		N
	b) For plug-connected PDS other than a) with an industrial connector according to IEC 60309, and PDS having a fixed connection		N
4.3.11	Capacitor discharge		Р
4.3.12	Access conditions for high-voltage PDS		N
	a) Operating conditions		N
	<ul> <li>b) Access for maintenance – earthing instructions</li> </ul>		N
4.4	Protection against thermal hazards		Ρ
4.4.1	Minimizing the risk of ignition	No maximum working temperature under normal load conditions was less than that necessary to cause ignition of the surrounding materials with which they are likely to come into contact.	P
4.4.2	Insulating materials		P

	EN 61800-5-1		
Clause	Requirement + Test	Result - Remark	Verdict

4.4.2.1	General	Suitable for the maximum temperature and mechanical strength	P
4.4.2.2	Material requirements		Р
	CTI of 100 or greater		Р
	Glow-wire test described in 5.2.5.2 at a test temperature of 850 °C		Р
	Incorporates switching contacts		N
4.4.3	Flammability of enclosure materials	See 5.2.5.4	Р
	Metals, ceramic materials, and glass		Р
	Flammability class 5VA		N
4.4.4	Temperature limits		Р
4.4.4.1	Internal parts	No excessive temperature measured. (see appended table)	Р
4.4.4.2	External parts of CDM	No excessive temperature measured. (see appended table)	Р
4.4.5	Specific requirements for liquid cooled PDS	Not for liquid cooling.	N
4.4.5.1	Coolant		N
4.4.5.2	Design requirements		N
4.4.5.2.1	Corrosion resistance		N
4.4.5.2.2	Tubing, joints and seals		N
4.4.5.2.3	Provision for condensation		N
4.4.5.2.4	Leakage of coolant		N
4.4.5.2.5	Loss of coolant		N
4.4.5.2.6	Conductivity of coolant		N
4.4.5.2.7	Insulation requirements for coolant hoses		N
4.4.6	Motor overload and overtemperature protection		N
4.4.6.1	Means of protection		N
4.4.6.2	CDM/BDM with electronic motor overload protection		N
4.4.6.3	CDM/BDM with electronic motor overload protection with thermal memory retention		N

	EN 61800-	5-1	
Clause	Requirement + Test	Result - Remark	Verdict

4.4.6.4	CDM/BDM with electronic motor overload protection which is speed sensitive	N
4.4.6.5	CDM/BDM providing monitoring and automatic reduction of motor current by means of thermal sensors	N
4.5	Protection against energy hazards	Р
4.5.1	Electrical energy hazards	Р
4.5.2	Mechanical energy hazards	Р
4.5.2.1	General	Р
4.5.2.2	Critical torsional speed	N
4.5.2.3	Transient torque analysis	N
4.5.3	Acoustic noise emission	N
4.6	Protection against environmental stresses	N

5	TEST REQUIREMENTS		Р
5.1	General		Р
5.1.1	Test objectives and classification		Р
	Type tests;		Р
	Routine tests;	Be carried out by the manufacturer.	N
	Sample tests;		Ν
5.1.2	Selection of test samples	Considered	Р
5.1.3	Sequence of tests	Considered	Р
5.1.4	Earthing conditions	TN power system considered	Р
	Neutral to earth;		N
	Line to earth;		Р
	Neutral to earth through high impedance;		N
	Isolated (not earthed)		N
5.1.5	Compliance	See below. Verified by suitable examination, visual inspection, and/or measurement	Р
5.1.6	Test overview	Type tests followed the specification of table 17.	Р
5.2	Test specifications		Р

	EN 61800-5-1		
Clause	Requirement + Test	Result - Remark	Verdict

5.2.1	Visual inspections (type test, sample test and routine test)	Inspect the labeling, warnings of the PDS delivered	Р
5.2.2	Mechanical tests		Р
5.2.2.1	Clearance and creepage distance (type test)	Comply with table 9 and table 10 by measurement. (see appended table)	Р
5.2.2.2	PWB short-circuit test (type test)	Short-circuited one at a time and be maintained until no further damage occurs. No emission of flame, no deformation of enclosure, no hazard.	Ρ
5.2.2.3	Non-accessibility test (type test)	No accessible to live parts protected by means of enclosure and barriers.	Р
5.2.2.4	Enclosure integrity test (type test)	IP20	Р
5.2.2.5	Deformation tests		Р
5.2.2.5.1	General	No crack of enclosure, no live parts become accessible.	Р
5.2.2.5.2	Deflection test (type test)	Steel rod (12.7mmx12.7mm), steady force of 250N, applied for 5s.	Р
5.2.2.5.3	Impact test (type test)	Steel sphere (weight: 500g) fall (height: 1300mm) test on surface of enclosure. No cracks, no accessible live parts.	Ρ
5.2.3	Electrical tests		Р
5.2.3.1	Impulse voltage test (type test and sample test)		Р
	For low-voltage PDS		Р
	For high-voltage PDS		N
5.2.3.2	A.C. or d.c. voltage test (type test and routine test)		Р
5.2.3.2.1	Purpose of test		Р
5.2.3.2.2	Value and type of test voltage		Р
	A.C. or d.c. test voltage for circuits connected directly to low voltage mains		N
	A.C. or d.c. test voltage for circuits connected directly to high voltage mains		N

	EN 61800-5-1		
Clause	Requirement + Test	Result - Remark	Verdict

	A.C. or d.c. test voltage for circuits not connected directly to the mains		Р
5.2.3.2.3	Performing the voltage test	(see appended table)	Р
a)	Test (1) between accessible conductive part connected to earth) and each circuit sequentially except DVC A circuits).		Р
	Test (2) between accessible surface (non conductive or conductive but not connected to earth) and each circuit sequentially (except DVC A circuits).		Р
b)	Test between each considered circuit sequentially and the other adjacent circuits connected together.		Р
c)	Test between DVC A circuit and each adjacent circuit sequentially.		Р
5.2.3.2.4	Duration of the a.c. or d.c. voltage test	5s for type test.	Р
5.2.3.2.5	Verification of the a.c. or d.c. voltage test	No electrical breakdown	Р
5.2.3.3	Partial discharge Test (type test and sample test)	Test according to IEC 60664-1.	N
5.2.3.4	Protective impedance (type test and routine test)	(see appended table)	N
5.2.3.5	Touch current measurement (type test)	(see appended table)	Р
	For a PDS to be connected to an earthed neutral system		Р
	For a PDS to be connected to an isolated system or impedance system		Р
	For a PDS to be connected to a corner earthed system		N
	For a PDS with a particular earthing system		N
	If a PDS is intended to be connected to more than one system network		N
5.2.3.6	Short-circuit test and Breakdown of components test (type tests)		Р
5.2.3.6.1	General		Р
	a) tests defined in 5.2.3.6.3 and 5.2.3.6.4	(see appended table)	Р
	b) calculation or simulation based on tests as defined in 5.2.3.6.3 and 5.2.3.6.4		Р
	c) for high-voltage PDS		N
	d) for custom PDS		Р
5.2.3.6.2	Test configuration		Р

EN 61800-5-1			
Clause	Requirement + Test	Result - Remark	Verdict

5.2.3.6.2.1	Supply voltage and current	100%-105% of the rated input voltage and or rated input frequency.	Р
5.2.3.6.3	Short-circuit test		Р
5.2.3.6.3.1	Load conditions	Creates the more severe condition.	Р
5.2.3.6.3.2	Location of short-circuit		Р
5.2.3.6.4	Breakdown of components test		Р
5.2.3.6.4.1	Load conditions		Р
5.2.3.6.4.2	Application of short-circuit or open-circuit		Р
5.2.3.6.5	Test sequence		Р
5.2.3.6.6	Pass criteria	No emission of flame, no deformation of enclosure, no hazard.	Р
5.2.3.7	Capacitor discharge (type test)		Р
5.2.3.8	Temperature rise test (type test)	(see appended table)	Р
5.2.3.9	Protective bonding (type test and routine test)		Р
	Test current of 10A, impedance ( $\Omega$ ).	<0.02Ω	Р
5.2.4	Abnormal operation tests	(see appended table)	Р
5.2.4.1	General		Р
5.2.4.2	Test duration	Performed until terminated by a protective devices or mechanism, a component failure occurs, or the temperature stabilizes.	Ρ
5.2.4.3	Pass criteria	No emission of flame, no deformation of enclosure, no hazard.	Р
5.2.4.4	Loss of phase (type test)		Р
5.2.4.5	Cooling failure tests (type tests)		Р
5.2.4.5.1	General		Р
5.2.4.5.2	Inoperative blower motor		Р
5.2.4.5.3	Clogged filter		Р
5.2.4.5.4	Loss of coolant		N
5.2.5	Material tests		Р
5.2.5.1	High current arcing ignition test (type test)		N

EN 61800-5-1				
Clause	Requirement + Test		Result - Remark	Verdict

5.2.5.2	Glow-wire test (type test)	Test according to IEC 60695- 2-10 and IEC 60695-2-13. (see appended table)	Р
5.2.5.3	Hot wire ignition test (type test - alternative to Glow-wire test)		N
5.2.5.4	Flammability test (type test)	Not burn.	N
5.2.6	Environmental tests (type tests)		Р
5.2.6.1	General	Tested on the complete equipment	Р
5.2.6.2	Acceptance criteria		Р
	<ul> <li>no degradation of any safety-relevant component of the PDSICDMIBDM</li> </ul>		_
	<ul> <li>no potentially hazardous behaviour of the PDSICDMIBDM during the test</li> </ul>		_
	- no sign of component overheating		_
	- no live part shall become accessible		_
	- no cracks in the enclosure and no damaged or loose insulators		_
	- pass routine a.c. or d.c. voltage test 5.2.3.2		_
	- pass Protective bonding test 5.2.3.9		_
	- no potentially hazardous behaviour when the PDSICDMIBDM is operated following the test		_
5.2.6.3	Climatic tests		Р
5.2.6.3.1	Dry heat test (steady state)	Test according to IEC 60068- 2-2. Operating at rated conditions. 40°C, 16 hours.	Р
5.2.6.3.2	Damp heat test (steady state)	Test according to IEC60068-2- 78. Power supply unconnected. 40°C, 93%RH, 96 hours.	Р
5.2.6.4	Vibration test (type test)	Test according to IEC60068-2- 6. Power supply unconnected. Sinusoidal motion, Vibration amplitude/acceleration:10 Hz $\leq f \leq 57$ Hz (0,075 mm amplitude); 57 Hz < f $\leq$ 150 Hz(1g). Vibration duration: 10 sweep cycles per axis on each of three mutually perpendicular axes.	Р
